# bindplane

Your Unified Telemetry Platform

Bindplane is an industry-leading telemetry platform built to streamline telemetry operations and reduce costs by giving teams total control of their data.

Freedom Through Unity

Bindplane amplifies and elevates OpenTelemetry's key benefits of **data ownership** and **vendor-agnosticism** by unifying the critical aspects of a telemetry pipeline in a single location:

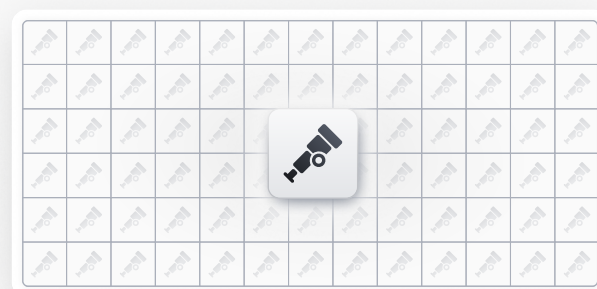

1

Unified Telemetry

Powered by OpenTelemetry, Bindplane enables to teams gather, process, and ship metrics, logs, and traces all from a **single** tool, in a standardized way.
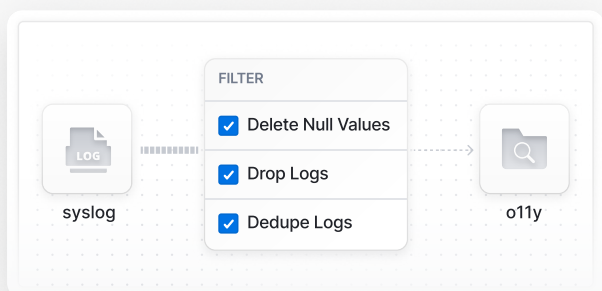

Unified Fleet

From Bindplane, teams can deploy and manage up to 1 Million OTel Collector deployed across their environments.

2

3

Unified Control

Bindplane streamlines a teams' ability to sculpt and direct their data by coupling live preview and snapshots with intelligent controls.
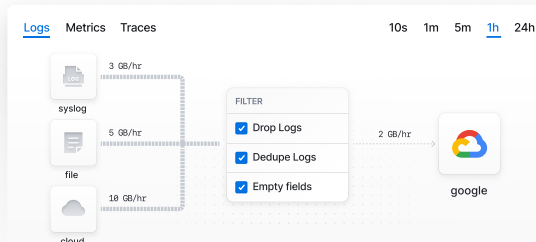

Take Control of Your Data

Through Bindplane's unified interface, teams have the visibility and controls to take informed action on their data in a way never possible before.
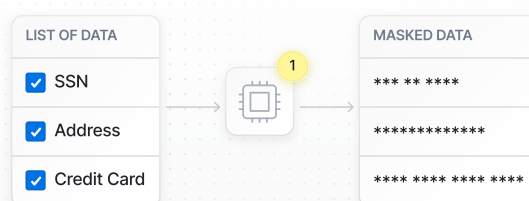

Use cases

Reduce Log Volume

Reduce log volume by 40% or more with simplified filters before arrives at its destination for analysis.

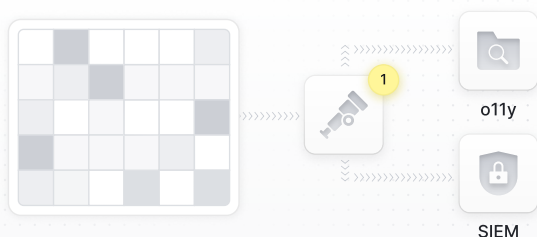

Mask Sensitive Data

Remove or encrypt sensitive data before it leaves your servers, making compliance and security simple.

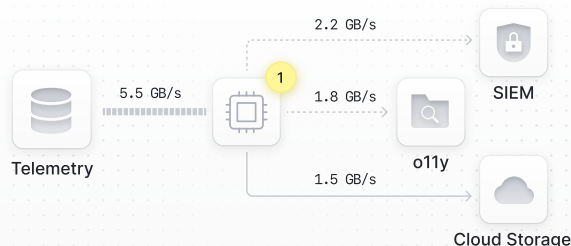

Platform Migration

Bindplane makes platform migration smooth and efficient, reducing downtime and ensuring data continuity.

Route to Affordable Storage

Route compliance data to affordable cloud storage while sending critical monitoring data to your expensive analysis tools.

Proud Contributor to the OpenTelemetry Project

OpenTelemetry is a collaborative project founded by the Cloud Native Computing Foundation to create industry-wide standards that will benefit all cloud service providers.
